

Monitoring	 <p><i>Engine View</i></p> <p>Whether you are interested in monitoring your vessel's systems while underway or remotely from your home or office, Maretron's N2KView software displays the information you need including engines, gensets, tanks, rudders, navigation instruments, local weather, electrical systems and more.</p>
Environment	 <p><i>Environment Screen</i></p> <p>N2KView is completely user-configurable and you are free to design different screens to your exact needs while easily switching from screen to screen for monitoring all your systems. Digital displays, analog gauges, graphic displays, warning lights, bar graphs, all can be configured exactly how you want them to be. You can even set the operating limits and color bands for analog gauges so you know when things are within limits and when they are not.</p>
Navigation	 <p><i>Navigation Screen</i></p> <p>Once you connect a PC to the NMEA 2000® network using the Maretron USB100 gateway (N2KView Server), you can connect other PCs or handhelds (N2KView Clients) using conventional technology like Ethernet or Wi-Fi for remote viewing of things like tank levels up on deck while fueling, or for monitoring the vessel's location anywhere in the world using an Internet connection back to the boat.</p>
Electrical	 <p><i>Electrical Screen</i></p> <p>We can customise your displays and sensors. Contact us to discuss your requirement now.</p>

see you at the Cannes and Monaco Yacht Shows!
