## Door Bell

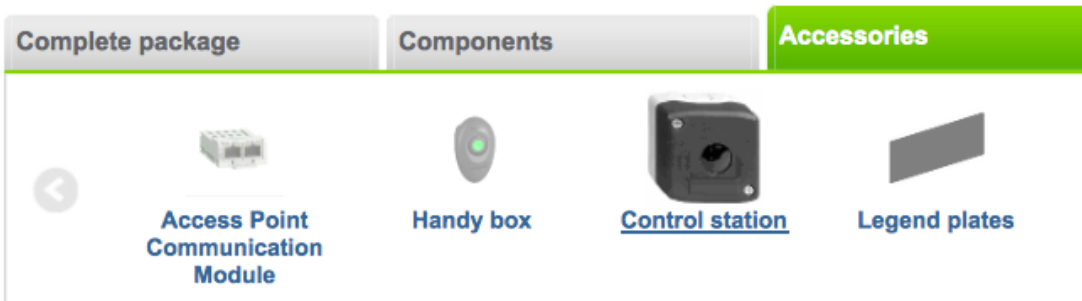

Utilizing wireless technology, our Batteryless push button is easy to install on your passerelle. Now, you no longer need to pass a cable through the gangway to connect the push button to the buzzer. When the visitor pushes the button, mechanical energy is transformed into electrical energy, which sends a one-time radio message to the receiver. The batteryless solution offers permanent availability, benefits the environment, and eliminates costly battery maintenance, re-charging and recycling. The wireless technology helps to achieve greater productivity by providing crew with greater freedom and mobility. The wireless, batteryless push button is well-suited for harsh industrial environments.

The receiver is powered with 24v DC and can be interfaced with existing alarm systems, buzzer and door bells. Accessories include mounting boxes, handheld units, custom plates and programmable receivers.

Contact us today to get a quote and get rid of these messy cables!

DOOR BELL - NO BATTERY – NO CABLE
